COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

COTTON PRODUCTION IN TEXAS, 1928-1937

- By Counties -

The acreage planted to cotton in Texas during the past 10 years has varied from 17,578,000 acres in 1929 to 10,685,000 acres in 1934. Planted acreages during the years 1935, 1936, and 1937 were somewhat larger than in 1934, but were considerably smaller than during the period immediately preceding the acreage control programs of the Agricultural Adjustment Administration. Approximately 4,350,000 acres of cotton were removed under the terms of the first cotton program in 1933.

The yield per acre during this period ranged from 108 pounds in 1929 and 1934 to 193 pounds in 1937. Yields in 1929 and in 1934 were materially reduced by lack of moisture and excessive temperatures before harvest time. In 1937 weather conditions were almost ideal for the development of the crop.

Production of cotton is expressed in 500-pound equivalent gross weight bales, and has varied from 5,320,000 bales in 1931 to 2,401,000 bales in 1934.

During the past 10 years the trend in cotton acreage has been upward in the northwestern counties as compared with the remainder of the State. This increase in acreage has been due largely to new land being brought into cultivation, and to unsatisfactory yields on winter grain crops.

The estimates of production are based upon the ginnings within each county as reported to the U. S. Bureau of the Census, with adjustments for cross-county movement of seed cotton.

The estimates of acreage planted are based upon the U. S. Censuses of 1925, 1930, and 1935, available data from the Agricultural Adjustment Administration for the years 1933 to 1937, inclusive, and current reports from crop reporters.

The estimates of yield per acre are based upon yields computed from acres and bales reported to the Census Bureau in Census years, and upon current reports from crop reporters relating to yield in that year.

The estimates of acreage planted and of yield per acre were then reconciled with the estimates of production in such manner that a consistent series of estimates of acreage and yield per acre resulted.

V. C. Childs,
Senior Agricultural Statistician.

Prepared by-
Henry L. Rasor,
Agricultural Statistician.
